Supply Chain Metrics

Ever wondered how businesses keep track of their supply chain performance? Well, that's where supply chain metrics come into play. These are like the measuring tapes of the business world, helping companies gauge how efficient and effective their supply chain processes are. We look at things like delivery times, inventory turnover, and supplier lead times to see where improvements can be made.

Purchasing KPIs

Picture this: you're on a shopping spree, but instead of buying clothes, you're tracking **key performance indicators (KPIs)** in purchasing. KPIs are like checkpoints on a treasure map, showing businesses if they're hitting their purchasing goals. Metrics like cost savings, supplier quality, and on-time deliveries are key KPIs that businesses keep an eye on to ensure they're making smart purchasing decisions. Supplier Performance Evaluation

Think of this as a report card for your suppliers. Just like how teachers grade students, businesses evaluate their suppliers to see how well they're meeting expectations. Factors like product quality, delivery reliability, and responsiveness are considered when assessing supplier performance. It's all about building strong relationships with suppliers who can meet your business's needs consistently.
